SONOGRAPHY IN PREGNANCY

- Single, live intrauterine fetus is noted with cephalic presentation.
- Fetal movements and fetal cardiac activity is normal.
- Fetal bioprofile parameters are ---
- BPD = 6.12 cm = 24.6 weeks.
- HDC = 22.21 cm = 24.2 weeks.
- FML = 4.52 cm = 25.0 weeks
- ABC = 21.27 cm = 25.5 weeks.
- Av. Fetal gestational age is 25.1 weeks. EFW = 808 gms.
- Placenta is on posterior; it is not.previa. It shows grade I Maturity. There is no e/o retroplacental hematoma.
- Amount of amniotic fluid is adequate. .

- Single, live, intrauterine pregnancy of 25.1 weeks noted with cephalic presentation. **OPINION**
 - Placenta is posterior, shows grade I maturity.
 - Maternal obesity, thick maternal abdominal wall, Overlapping of fetal limbs and fetal postion made visualisation of all limbs and complete fetal evaluation, not possible.Otherwise. No e/o gross fetal congenital anomaly seen.

I have neither detected nor disclosed the sex of the fetus of this pregnant woman to her or any body. This Os is closed. Cervix shows normal dimensions. sonography examination is not done for determination of the sex of fetus. Detection of sex of the fetus is

All the fetal congenital anomalies or fetal inborn defects are not visualized or detected on sonography due various reasons like; thick anterior strictly prohibited and is not done at this centre. abdominal wall of patient,unfavourable fetal positions overlapping of fetal parts,lack of fluid pockets around the fetus; at the time of sonographic examinations. Hence any doubts or discrepancies must be followed by / considered for further sonographic examinations fETAL ECHO IS NOT THE PART OF THISEXAMINATION. SULTANTRADIOLOGIST
